

Assignment 4: Finite Element Computation in One and Two Dimensions

ME/BME 736 — Advanced Finite Element Methods

Prashant K. Jha

2026-09-29

Submission

Each problem has its own notebook in [assignments/assignment-04/notebooks/](#), which gives the detailed tasks. Set up the environment by following [environment/README.md](#) and use the kernel **Python (Finite Elements)**. Submit the two completed notebooks, renamed `lastname_assignment04_1d.ipynb` and `lastname_assignment04_2d.ipynb`. Each must run without an error after **Restart Kernel and Run All Cells**. No separate report is needed.

Problem 1 (60 marks): A linear finite element code for a one-dimensional bar

Notebook: `problem1.ipynb`. Reading: Chapter 5.

Problem 2 (40 marks): Mixed-boundary diffusion with FEniCSx

Notebook: `problem2.ipynb`. Reading: Chapter 6 and the lecture notebook [notebooks/diffusion/diffusion_2d_](#)
